CATEGORY DETAILS

You will engage in challenging Python coding tasks and develop software solutions, highlighting your programming expertise, problem-solving abilities, and technical acumen.

This category will also assess your mathematical and logical reasoning skills in tackling complex problems.

- Teams can consist of 2-4 members.
- You will be judged on the effectiveness of your code as well as the quality and presentation.
- Teams will be given points between 1-5 based on these criteria and at the end from the teams that have not been eliminated the team with the highest points shall win.
- There are 7 problems that will be given to the team.
- Each problem of increasing difficulty and varying times.
- Teams will be eliminated if they are unable to complete the task within time or if their code is invalid.

**“Talk is cheap.
Show me the code.”**

~Linus Torvalds
